

Bank of Nerds Write-Up

Jerimiah Katen

February 2021

1 Project Summary

Bank of Nerds is a basic banking system. The bank should include accounts, customers, transactions and a menu interface. Customers can have multiple accounts. The types of accounts a customer can have are; savings, checking, 401(k) and Money Market Fund.

2 Challenges

My lack of experience with TDD and the concept of this project made me feel like I was working in slow motion. I was constantly struggling to stay motivated and solve all the little problems for the project.

I got stuck for a while because I wanted to make some kind of dynamic menu class. I'm not sure if the way I implemented the menus is good or not.

I think I'm really starting to get burnt out.

3 Successes

Aside from a few hiccups, things went pretty smoothly.

I think I'm getting a better understanding of how and when to use classes.

4 Lessons Learned

I really like object oriented programming, but I'm not sure if I actually know what I'm doing yet.

Making menus is kind of tedious and I hate it.
