## 1 Project Summary

Write a program that prints out increasing prime numbers to standard output, approximately one every second.

## 2 Challenges

Writing good documentation.

Figuring out exactly how I wanted to tackled all of the problems in a way that didn't make my code look too much like a bowl of spaghetti while also using things that were new to me.

## 3 Successes

The project seems to go along very smoothly. Didn't run into any major obstacles.

I know I didn't use everything we've been taught in this section, but I feel like the things we have learned are really cool.

## 4 Lessons Learned

The things we were taught applied to the project and made it fun.

I don't like writing documentation.
