fibonacci

Jerimiah Katen

April 2021

1 Project Summary

Fibonacci is a program in x86 Assembly Language that uses the first command-line parameter as a number N from 0through 100. The program should then print out F(N), in hexadecimal.

2 Challenges

I feel like I didn't quite learn enough assembly throughout the week to be able to accomplish this project much confidence.

Registers getting destroyed on function calls caused me some grief.

3 Successes

I think assembly is really cool.

My partner is a genius.

4 Lessons Learned

Assembly big.

Assembly.
